~~Mopar Intake Manifold Casting Numbers 1959-1974~~

There are two sure ways to identify a Chrysler 383 CID (cubic inch displacement) V8 engine. The first is to locate and decode the large casting number on the left side of the block. The second and easier way is to locate and decode the hand-stampings on the block's ID boss. Please note that while a casting number on an engine intake manifold, cylinder head or other part can identify a Chrysler 383 component, such identification is not the same thing as identifying the engine as a 383.

~~Mopar Casting Numbers - MyMopar.com - Mopar Part Numners~~

The casting number is probably the most significant feature on an intake manifold. The casting date is usually found near the casting number. Intake manifolds are normally date coded in the form of a letter for the month (see table below), two numbers for the day and a single number for the year. For example, C259 indicates a date of March 25, 1969.

~~A Guide To Mopar V8 Cylinder Head And Block Casting Numbers~~

The 340 6-barrel is the most unique production intake manifold. This dual-plane manifold is aluminum and holds three inline Holley 2-barrel carburetors. The casting number, 3418681, is between the first and second carb pads on the left. The high-performance 340 4-barrel intake manifold fits the Carter/Edelbrock AFB and AVS carburetors.
