Student Exploration: Distance-Time Graphs (ANSWER KEY)
Sample answer: Distance-time graphs show the starting position, direction, and speed of a moving object. If there are two objects, the distance-time graph can show which object is moving faster, which object has a head start, and when and where the two objects cross paths.

In the Gizmo, run the "race" many times with a variety of different graphs. (The red points on the graph can be dragged vertically.) Pay attention to what the graph tells you about the runner. If a distance-time graph contains the point (4, 15), what does that tell you about the runner?

Distance-Time Graphs - Zachary High School
Create a graph of a runner's position versus time and watch the runner complete a 40-yard dash based on the graph you made. Notice the connection between the slope of the line and the speed of the runner. What will the runner do if the slope of the line is zero? What if the slope is negative? Add a second runner (a second graph) and connect real-world meaning to the intersection of two graphs.

The Distance-Time and Velocity-Time Graphs Gizmo includes that same graph and adds two new ones: a velocity vs. time graph and a distance traveled vs. time graph. The graph shown below (and in the Gizmo) shows a runner's position (or distance from the starting line) over time. This is most commonly called a position-time graph.

Interpreting Distance-Time Graphs Horizontal Line = object is _NOT_ moving! *Time always goes on the _X_ axis because it is the _independent_variable_. *The further to the right on the x axis, the longer the time from the start. *The higher up on the y axis, the further from the start.
